Press release

BCGSoft technologies integrate with Visual Studio 2010.

April 29, 2010 –St. Petersburg, Russia. BCGSoft Co Ltd today announced that some BCGSoft technologies were sold to Microsoft Corporation and integrated with Visual Studio 2010.

"We're happy that our experience in creating advanced GUI was chosen by Microsoft and we did our best to make our favorite developer product better" – said Stas Levin, CEO of BCGSoft. "Hope, that all developers who are using Visual Studio 2010 will find our features helpful, efficient and easy to use. Because our development team has deep experience in Visual Studio usage, we had a lot of ideas about how to improve this product and it's a great honor for us that Microsoft included our solutions in the new product version!"

"It was a very challenging job." – said Vitaly Meytin, CTO of BCGSoft. "We had to work closely with Microsoft development team to assure seamless integration of the newly developed features with the existing Visual Studio infrastructure. We believe that this cooperation was very productive and many C++ developers will appreciate our efforts."

"Through their previous work, BCGSoft have established themselves as experts in user interface components." – said Craig Symonds, Visual C++ Group Program Manager. "The work they have done for MFC in Visual Studio 2010 will enable great experiences for native developers on the Windows platform. Their reputation as thorough professionals and leaders in this space is well deserved. It was a pleasure working with them."

BCGSoft had implemented both IDE and library features. IDE features such as MFC Class Wizard, integrated Ribbon Designer and '#include AutoComplete' significantly increase developer productivity and reduce the time required to maintain large projects.

ATL/MFC additions and improvements such as Windows 7 interaction support, touch screen helpers, new classes for Transactional File System and many other features allow the developers to take advantage of the new Windows features with few lines of code.

See the full list of our features that were integrated with Visual Studio 2010:
